Work Experience

FPT Software – Senior Software Engineer

Seoul, South Korea (Dec 2024 - Present)

Summary: Designed and developed automation solutions for automotive hardware security testing and distribution processes using Python, Flask, SQL, RDBMS, REST APIs, Robot Framework, Trace32, CANoe, MCUs

- Client: Hyundai Autoever (Automotive Security Project)

- Led development of a multi-threaded automation tool for hardware security module build and test pipelines, enabling parallel execution and significantly reducing manual testing time.
- Built an end-to-end automated packaging and distribution tool for hardware security modules, unifying processes across multiple servers, improving delivery reliability and reducing operational overhead.
- Developed a modular Python API library enabling automated MCU security testing.

Appian – Software Engineer II

Washington DC, USA (Sep 2021 - Nov 2024)

Summary: Developed full-stack enterprise applications using Java, Spring Boot, Appian SAIL (UI), Hibernate ORM, SQL, RDBMS, Kafka, Elasticsearch, AWS S3, Docker, Quartz Scheduler, CI/CD, REST APIs, and OpenAPI.

- Process HQ - Workspace for Business Insights:

- Led development of an ETL pipeline with a streamlined user experience to stream **2M+ rows** from Appian's Data Fabric to Mining Server for business data analysis
- Defined an OpenAPI spec and built infrastructure to auto-provision processes for over **250K+ Appian Community Edition users**.
- Designed sync schedule configurations and error-handling mechanisms for reliable data syncs.
- Built a bulk query mechanism reducing data retrieval latency by **50%**.

- Portals - Public Websites in Low Code:

- Developed Portals using Kafka and Elasticsearch to automatically publish changes to AWS, for **500+ customer sites**.
- Built an Elasticsearch lock and heartbeat mechanism to prevent conflicts during concurrent publishes.

- Others:

- Introduced a Quartz Scheduler module, reducing internal development overhead for background jobs by **90%**.
- Led compliance and auditor-driven feature development for cross-environment deployments, driving revenue increase of **\$500K**.
- Developed deployment APIs and improved UX for cross-environment deployment pipelines.

Appian – Software Engineer Intern

Remote (Jun - Aug 2020)

- Enhanced bulk execution testing capabilities using Java, Spring Boot, Appian SAIL (UI).

Volkswagen Credit – Software Developer Intern *Washington DC, USA (May - Aug 2019)*
- Automated deployments using AWS (ECR, EC2, ECS, S3, CloudFormation, CloudFront) and Docker.
Built Kubernetes POC using EKS.

Ridgeback Network Defense – Javascript Developer Intern *Remote (Aug 2018 - Apr 2019)*
- Built network data visualization widgets using Vis, D3 and Javascript.

Forge (Hackcville) – Software Engineer Intern *VA, USA (May - Aug 2018)*
- Built web apps using React, Firebase, and REST APIs.

Projects

Appian Hackathon - Expression Rule Debugging (2021)
- Enables debugging low-code logic using Java, Appian SAIL (UI). **Awarded 1st for Popular Vote.**

COVID Dashboard (2021)
- Data visualization dashboard using Node, React and CovidActNow API.

ShareIt (2018)
- 3-tier e-commerce web app using Django, Docker, Elasticsearch, Kafka, Haproxy, Selenium.

Skills

Languages	Java, Python, Javascript, SQL
Frameworks	Spring Boot, React, Node, D3, Django, OpenAPI
Cloud/DevOps	AWS, Docker, Kafka, Elasticsearch, Grafana, Prometheus
Tools	RDBMS, Hibernate ORM, Quartz Scheduler
Familiar	Kubernetes, Pandas, Numpy, Scikit-learn, Tensorflow

Education

University of Virginia – B.S. Computer Science *VA, USA (Aug 2017 - May 2021)*
GPA: 3.8/4.0 (Magna Cum Laude - High Distinction), Statistics Minor

Thomas Jefferson High School for Science & Technology *VA, USA (Sep 2013 - Jun 2017)*
